Subject: Dimock Residential GW Site Preliminary Results

Preliminary results for the Dimock Residential GW Site are included in the attachment. Included are results on the priority constituents from all labs, where available. Level of certainty is provided when results are above screening levels.

Results at or above screening levels:

Arsenic: Several samples have Arsenic results above screening levels (HW06, HW12). One result was determined to be at the screening level for As (HW02). Results from HW02-F (filtered sample) and HW02z are provided since those results were below screening levels and not previously reported. Final review is complete for these results. Attached is the partial EDD report for all metals for samples under WO# 1201013.

Lithium: Several samples have Lithium results above screening levels (HW06, HW24, HW24-P). Final review is complete for these results.

Sodium: Several samples have Sodium results above screening levels (HW06, HW24, HW24-P). Final review is complete for these results.

Methane: One preliminary result is above the screening level for methane (HW12). Since this result is above the calibration curve the sample is currently being re-run and this result should be considered estimated.

Report Files:

A separate email will follow with final reports that have been placed on the R03FTPUser site in directory EPA Laboratory.

Please contact me at 410/305-2732, or Robin Costas 410/305-2659, if you experience delivery problems with this report. A copy of this e-mail will be retained in the case file.
